

Same Day Web Design

Here's what you'll need for your same-day web design experience:

- Hosting.** You'll need to have this taken care of beforehand. If it's a new website, then I'll work with you over the phone to get this set up. It takes about 10 minutes. You can learn more about what this entails by clicking here. If you have an existing site that's being re-designed, I'll need to have your login credentials so I can have things ready to hit the ground running on our scheduled date.
- Domain:** Same as above. We need to have this set up ahead of time. Not a problem if it's a site re-design. If it's a new site, we just need to take care of this along with the hosting (see above).
- Questionnaires:** Once your contract is signed and a deposit made, you'll receive a link to a folder with questionnaires to walk you through the copy and content needed for the site. Filling them out during our all-day event reduces the amount of time we'll have to create the website.
- Photos:** You can upload them to the same folder mentioned above. Or you can bring them in on a flash drive. I'll then compress them and transfer them to your new website.
- Colors:** It's helpful if you already know the colors you want to use. If not, we can work together to find the ideal colors. You can use this website to find complimentary colors.
- Logo:** If you already have your logo, you can upload it the above mentioned folder. While we can design a simple logo for you during this time, it may take away from valuable design time for the website.
- Pizza Toppings:** We're going to work up an appetite designing this site so we're ordering in PIZZA! Let me know what toppings you like ;)

Signature

Date

- I acknowledge that when my date is scheduled to have my website created in a day, that I am responsible for having the above mentioned items ready. Any time that is needed beyond the 8 hours may be subject to additional fees.

Address
